

Environmental policy

Skellefteå Kraft wants to be a positive force for the community and shall promote and work for a 100% renewable energy production. We want to develop our business in a long-term and responsible way at the same time as we take the lead in tomorrow's sustainable energy supply.

We achieve this by focusing on the issues where our environmental impact is most significant and where we have the main possibility and potential to make a difference. Based on our goals and together with our stakeholders, we want to create a drive to constantly improve.

For us it means that:

- The responsibility for fulfilling laws and other binding requirements is shared by all employees, where co-creation, education and learning ensure development and continuous improvement.
- Our environmental work shall generate both business and environmental benefits and is characterized by efficiency, development, continuous improvement and the prevention of pollution and environmental accidents.
- All management and production and distribution of energy and raw materials shall, in a local, regional and global perspective, be conducted with good environmental consideration.
- We set goals for the environmental work within our business, follow up and transparently reports our results.
- We must strive for our operations and projects to use natural resources and ecosystem services in a way that allows for maintained biodiversity and populations of species.
- We aim for our operations in the future to contribute to increasing the biological diversity based on the current situation.
- Together with our partners, suppliers, contractors and consultants, we will work for long-term and responsible environmental work.
