

Environmental policy

Skellefteå Kraft aims to be a positive force in society and will work for sustainable energy supply with the least possible environmental and climate impact. We want to develop our business in a long-term and responsible way at the same time as we take the lead in tomorrow's sustainable energy supply.

We achieve this by focusing on the issues where our climate and environmental impact is most significant and where we have the greatest opportunity to make a difference. Based on our strategy, and together with our stakeholders, we strive for continuous improvements.

For us it means that:

- We shall contribute to a sustainable societal transition through renewable energy production and the electrification of transport and industry.
- We shall minimize the operation's climate impact by primarily reducing fossil emissions throughout the value chain.
- We shall work to use ecosystem services in a way that maintains and, over time, increases biodiversity and viable populations.
- Environmental considerations are part of our daily operations. The responsibility is shared by all employees where co-creation, education, and learning secure development and continuous improvement.
- We shall prevent environmental risks and environment-related accidents and comply with binding requirements.
- We set goals for environmental and climate work in our operations and are transparent in the communication of results and performance.
- We shall, together with our stakeholders, work for a long-term and responsible environmental and climate effort.
- We shall actively contribute to research and innovation that creates sustainable societal development.
